Experience

▶ Full-Stack Developer (Contractor) at Facebook 2020-7 - 2021-1

- Worked alongside a team of 8 to build new product pages for the Oculus website.
- Created new components for use in Facebook's internal CMS for usage across the Facebook Marketplace for Business, Spark AR, and Portal microsites.
- Was able to learn PHP while on the job to provide some assistance in code review after the unexpected departure of several teammates.

▶ Partner, Creative Technologist at Dial Up Digital 2017-06 - Present

- Founded a creative development studio focused on designing and developing rich and delightful applications for artists & other creative organizations.

Public Works

- Designed and developed the mobile UI and UX for The 2019 Summer Smash Festival, an annual music festival hosted by a client of ours for over 40K attendees. Used React Native to build the app. Currently refactoring the app with a new UI for this year's festival.

Baby Faith

- Worked on a team of 4, leveraging IBM Watson APIs to build Faith, a conversational AI chatbot developed for Rhizome's Info-Wars research season. Built with Next.js and commissioned by Rhizome, a NYC artists organization affiliated with the New Museum of NYC.

▶ Creative Technologist at Schooooool 2019-08 - 2020-02

Public Works

- Created an online platform with Brooklyn design studio Schooooool that showcases & archives monthly live streams from different creative studios/agencies/companies and gives viewers a "day-in-the-life" perspective from places that are doing interesting work. Website built with Next.js, and used a Mevo+ and Vimeo to stream.

Schooooool University

- Our team was invited to participate in an Instagram residency giving us access to an account with 14k+ followers for a week. We turned an Instagram residency into a performative experiment simulating what it might be like to utilize social media platforms as an interactive educational tool.
- I built a web app that refreshed every hour with a quiz that pertained to the content exhibited in a video published on that account. At the end of the day "students" received a digital report card and their ranking. The students with the most correct answers and the most correct answer for the Bonus Question won \$100.

Education

▶ Northwestern University — B.A. Computer Science 2015 - 2019

- Advanced knowledge of software engineering, mobile & web development techniques
- Researcher in the Northwestern University Knight Lab and Delta Lab
- Completed Software Engineering internships with Twitter, Lyft, IDEO, and NBCUniversal
